Covers the latest July 2024 exam changes.

Complete preparation for the AZ-204 Azure Developer exam.

Get your questions answered inside the course. A great value since this course is updated as Microsoft changes the exam requirements over time. This course will be ready for you when you are ready to take the exam.

**What students are saying:**

- *5 stars, "Great in-depth coverage, easy to understand, good examples to practice."* - Andy K.
- *5 stars, "Good explanation, easy to catch up."* - Paul C.
- *5 stars, "Seems up to date and thorough, and is a really good bargain"* - Stephen I.

Welcome to this course.

Fully captioned in English.

This course has been continually improved and covers the AZ-204 Azure developer topics.

Microsoft Azure is a skill in high demand in today's large business marketplace.

If you're a developer, you know as well as I do that change is always happening. It's not possible for all of us to be up-to-date on every piece of new technology out there, but this is not one of those times. Cloud-hosting has changed the way all applications are developed—from websites, to web applications, to mobile apps, and traditional backend applications as well. The rapid adoption of the cloud has touched everything.

The next time your resume is on someone's desk—be it a promotion at work or a new job opportunity—you cannot afford to have such an obvious gap in knowledge. Can you imagine being a front-end web developer today and not being able to talk about mobile-first or responsive design? Industry trends show that developing applications using cloud-hosted components is becoming the in-demand skill of tomorrow. Having Azure skills on your resume will only help you get in front of more hiring managers and land more jobs.

This course goes through all of the requirements of the Microsoft exam **AZ-204: Developing Solutions for Microsoft Azure** exam. While other online resources cover bits and pieces of the topic, I can confidently say this course goes deep on everything you need to know for this exam.

Multiple videos are devoted to each sub-objective, and this course also includes a full sample test so you can see how ready you are to take the real test.

If you don't have much previous exposure to Azure, this course will cover each core section in detail. If you ARE already an expert at many Azure topics, you can easily skip the sections that you already know and focus on the sections that are new to you.

This Azure exam is tough. But these videos will guide you through the Azure interface, and through your own practice and experience with the platform.

You get lifetime access to the course, and so there are no silly "30-day" countdowns that require you to pay more to extend access. This course will be here when you need it.

## Instructors

### Scott Duffy • 1.000.000+ Students

Bestselling Azure & TOGAF® Trainer, Microsoft Azure MVP

Hi there, my name is Scott Duffy. And I love making complex technical topics easy to understand.

This has been the basis of my entire career – as a developer, as a development manager, as a software architect – over the past 20 years. I spend half my time in the world of business, explaining complex technical topics to business owners and stakeholders so that they can

understand and agree with my approach to solving their business problems with technical solutions. And the other half with developers, explaining the business reasons behind decisions and ensuring that any decisions made on the technical side don't restrict the business in unexpected ways.

And I'm here on Udemy to teach what I know in an approachable way. I started teaching courses in 2014, and have taught over 1,000,000 students. I am grateful every day for being able to connect with so many students in almost every country around the world.

I'm a certified Enterprise Architect and certified cloud architect. I have been developing with Microsoft technologies for 20 years, starting with Classic ASP, and all the versions of .NET. We now live in the cloud era, with Microsoft Azure being prevalent in most large enterprises. I'm certified as an Azure Architect and Developer too. As well as AWS Solution Architect Associate (SAA).

Microsoft MVP Award winner for 2022-2025.
